Afrikanistik-Aegyptologie-Online is a peer-reviewed journal. The Journal represents African Studies in the context of the so-called Westermann’s diversified comprehension of Africa, and gains additional historical depth from the perspective of Egyptian Studies.

The main areas of interest are linguistics, communication studies and literature, as well as the culture and history of Africa. Studies on this area will be published as both articles and monographs.

The Journal provides a platform for preliminary results and reports to be published. In addition, reader participation will be facilitated through interviews and forums, as well as through the submission of commentaries on all publications, including those released in the past.

The Journal operates as an instrument of review, informing readers about the latest academic literature. Thus, this also enables publishing houses to announce their current publications.

Afrikanistik-Aegyptologie-Online is an open-access e-journal that allows immediate access to current scientific studies, even in areas where printed publications are not available or are not easily accessible.

The Journal’s special concern is to make use of the capacity for electronic publications to allow for the delivery of multimedia-based, interactive presentations – a significant advantage over more traditional, print journals. Contributions to the Journal may be complemented with large-scale images as well as audio and video files.

Instead of editions of the Journal being published periodically, contributions will instead be quickly made available online as soon as they are cleared by the reviewers.

Afrikanistik-Aegyptologie-Online is a multilingual journal. English, German and French are the main languages for articles. They are also normally preceded by abstracts in English, German and French, and where possible in an African language or in Arabic.
Management of scientific information using digital technologies allows for quick and immediate access to knowledge in the fields of research and teaching practice. However, maintaining quality and the ability to effectively cite this information is crucial in the face of the vast amount of information available on the internet. The DiPP protocol for academic communication goes beyond that of traditional journals, as it allows for the embedding of dynamic media and source material into the research itself.

**Goals**

- enhance the usage and visibility of scientific information through transparent and significant use of web technologies.
- publication of data in multiple and diverse formats
- self-explanatory research through extensive reproduction of scientific processes
- faster publication through the use of digital technologies
